

# Embrilliance Essentials and More Computer Software Class

Class #155 March 18, 2026

**Embrilliance Essentials** is user-friendly embroidery software for Mac & PC, providing essential tools to manipulate, combine, and personalize machine embroidery designs, letting you merge designs, resize with stitch recalculation, add text/monograms (including spiral/curved), colorize, remove hidden stitches, and print templates, making it great for customizing existing designs without needing complex digitizing skills.

I will also demonstrate Stitch Artist 3 digitizing software to show you how easy you can digitize with its auto-digitizing feature! And create applique designs that will export the SVG files so you can cut the fabric pieces on your **scan n cut** machine! They cut nice and clean and no trimming required!

If you don't own Embrilliance Essentials or Stitch Artist 3 you are welcome to join the class to see if this software is a fit for you!

Supplies needed - Laptop, power cord, mouse and softwares installed if you own them
