

Lettering Class

CanvasWorkspace offers a generous amount of fonts to create with but this still leaves us wanting some that look like handwriting/cursive. Well we can do that with the ScanNCut Text converter application that Brother created! This is a free application to download. I will be teaching you how to use the fonts installed on your computer to create a beautiful text that can be used as a vinyl project and can also be imported into DIME/OESD Cut and Stitch software to create an embroidery design! Wow just think of the possibilities for your quilt labels now!

With some simple commands we can turn our text into something cleanly cut or stitched!

If you have not downloaded the application from Brother web site click on the link below. Select model CM250 and it will take you to this page where you can download the app.
